

PRE-2018 BUSHNELL HYBRID GPS AND LASER RANGEFINDER

The Bushnell Hybrid GPS/Laser Rangefinder was introduced in June, 2010 and Bushnell discontinued this model at the end of 2017. In early 2018 at the PGA Merchandise Show, Bushnell introduced their new Hybrid (see the instructions for this new model on our website in the Bushnell section).

Using this Bushnell Hybrid with our GPS Quick Clip is a “no brainer”. As you may have already noticed, your Hybrid includes a standard 1/4” threaded tripod socket that is used to attach it to the motorized golf cart. The 2018 Bushnell Hybrid does not have this accessory.

Each Quick Clip comes with 2 (one for a spare) belt clip tab/tripod socket screw assemblies (see picture below). You simply screw the belt clip tab into the tripod socket (hand tight will be sufficient) of your Hybrid. Then place the Quick Clip anywhere on the windshield/roof support frame of the golf cart. Lastly, slide the belt clip tab (that is now attached to your Hybrid) into the keyhole slot of the Quick Clip. It’s that simple!

If you buy a Quick Clip, before playing your round of golf **please be sure** to check that the belt clip tab/tripod socket screw assembly is snug in the tripod socket and occasionally recheck it as you play.

Either the Stronger Double Magnet Quick Clip or the Super Double Magnet Quick Clip is required for the Hybrid due to its relatively heavy weight. The larger magnet on it has a magnetic attraction of 85 pounds and the second smaller magnet has a magnetic attraction of 31 pounds so it can’t dislodge from the cart frame. That said though, if you drive the cart recklessly and/or hit a severe bump at high speed, it is possible for the Hybrid (or any rangefinder for that matter) to pop out of the keyhole slot.
