

## **BUSHNELL PRO X2 INSTRUCTIONS**

See the picture below showing the optimal location at the laser lens end of your **Bushnell Pro X2** where you will need to place our belt clip tab/3M adhesive disk assembly. This location will give you the optimal center of gravity. With your Quick Clip, we include 3 (two spares) of these belt clip tab/3M adhesive disk assemblies, extra alcohol cleaning pads and extra 3M adhesive disks.

Using the included alcohol cleaning pad, clean the spot on your Bushnell and allow to dry. This removes any oils, sweat, grease and other yucky stuff so the adhesion is optimized. Peel the paper backing off of one of the belt clip tab/3M adhesive disk assemblies. Very carefully place the belt clip tab on the white circle as shown in the picture. CAUTION: The belt clip tab/3M adhesive will want to stick immediately to whatever it touches so use care when placing it on the spot and try not to touch the adhesive with your fingers. Apply some pressure on the belt clip tab for about 30 seconds.

Allow it to “set and cure” for a minimum of 48 hours (72 hours if possible is even better) before using your Pro X2 in the Quick Clip keyhole slot. That will enhance the adhesive properties of the 3M adhesive disk. The 3M adhesive is a viscoelastic polymer that is extremely strong and essentially indestructible. By allowing 48 to 72 hours “curing time”, the viscoelastic adhesive molds itself over time into the microscopic imperfections of the two joining surfaces. **If you have any doubts** about the 3M VHB adhesive, here is a link to a 3M document that includes the full details as well as videos of the 3M VHB adhesive.

To open this link, right-click directly on the link below, then from the list of optional actions then click on “Open Hyperlink”.

**VERY IMPORTANT:** If you follow the directions “to the letter”, the belt clip tab/3M adhesive disk assembly will stick instantly and you won’t be able to remove it using your fingers/hands (you may draw blood). It certainly cannot come off during your everyday use on the golf cart. If you ever need to remove the belt clip tab, simply warm the adhesive with a hair dryer. The adhesive will soften and you can peel off the belt clip tab, though it still won’t be easy. Don’t try to re-use that 3M adhesive that you peeled off as it loses some of its adhesive properties. Remove it and use a fresh 3M adhesive disk. You can re-use the black rectangular belt clip tab many times. Remove any remaining adhesive and clean it thoroughly with an alcohol wipe or a clean cloth with a dab of isopropyl (rubbing) alcohol. Carefully (see **CAUTION** above) place the fresh 3M adhesive disk on the belt clip tab.

If you need more belt clip tabs or 3M VHB adhesive, call us at 843-333-7453 or e-mail [sales@gpsquickclip.com](mailto:sales@gpsquickclip.com).

Thanks for buying our Quick Clip everyone! Please don’t hesitate to contact us if you have questions or concerns.
