

BUSHNELL TOUR X INSTRUCTIONS

As you already know, the new Bushnell Tour X does not have a tripod socket. All other previous Bushnell laser rangefinders had a tripod socket. So we bought a Tour X and experimented with different solutions to use it with the Quick Clip. Due to the weight of the Tour X (8 oz) we recommend the double magnet Quick Clip. The solution we've settled on is foolproof.

Attached are two pictures of each side of our Bushnell Tour X. Note where we've placed the "modified" (we simply cut the tab at each edge perforations) belt clip tab/3M VHB adhesive disk assembly as this is the exact spot where you'll be placing it. We placed one on each side of the Tour X though you don't need to do that. We did that just for convenience – when you want to hang the Tour X on the Quick Clip, either side will work and it saves time. Your Quick Clip package includes 3 of the belt clip tabs/3M VHB adhesive assemblies (2 spares) plus extra alcohol cleaning pads and extra belt clip tabs.

VERY IMPORTANT: If you follow the directions "to the letter", it will stick instantly and you won't be able to remove it using your fingers/hands (you may draw blood). It certainly cannot come off during your everyday use on the golf cart. Before using your Bushnell Tour X on the Quick clip, let it "set" for at least 48 to 72 hours as this also enhances the adhesion.

Instructions for attaching these modified belt clip tab/3M VHB adhesive disk assemblies to your Tour x: Using an alcohol prep pad, clean that spot on your Tour x and allow to air dry. This removes any oils, sweat, grease and other yucky stuff so the adhesion is optimized. Peel the paper backing off the belt clip tab/3M adhesive assemblies. **Very carefully** place the belt clip tab on the spot as shown in the Tour x picture. **CAUTION:** The belt clip tab/3M adhesive will want to stick immediately to whatever it touches so use care when placing it on the spot and try not to touch the adhesive with your fingers. Apply some pressure on the belt clip tab for about 30 seconds.

Allow it to "set and cure" for a minimum of 48 hours (72 hours if possible is even better) before using your Tour X in the Quick Clip keyhole slot. That will enhance the adhesive properties of the 3M VHB adhesive disk. The 3M adhesive is a visco-elastic polymer that is extremely strong and durable. By allowing 48 to 72 hours "curing time", the visco-elastic adhesive molds itself over time into the microscopic imperfections of the two joining surfaces.

If you have any doubts at all about the extreme holding power of the 3M VHB adhesive, below in blue is a link to a 3M document that includes the full details as well as videos of the 3M VHB adhesive. To open this link, right-click directly on the link below, then from the list of optional actions then click on "Open Hyperlink".

https://www.3m.com/3M/en_US/company-us/all-3m-products/~/3M-VHB-Tape-4991/?N=5002385+3293223574&rt=rud

If you ever want to remove the belt clip tabs, simply warm the 3M VHB adhesive with a hair dryer and it will peel off (though still requiring some effort) without any (or very little) residue. Don't re-use the belt clip tab with the old 3M adhesive as it loses its adhesion after removal. But you can always reuse the belt clip tab if it's not damaged or distorted. Simply remove any old adhesive. Clean it with an alcohol pad and allow to dry. Then peel the paper backing off of either side of one of the extra 3M VHB adhesives. Very carefully (it will want to stick instantly to whatever it touches) place it centered on the belt clip tab. Press on it with some pressure for about 30 seconds. Use a razor knife to trim off the overlapping edges of the 3M adhesive. Then you can follow the instructions in the 3rd paragraph above.

Please don't hesitate to contact us if you have any concerns or questions. Always remember too...if you aren't happy with the way your Bushnell Tour X works with the Quick Clip, we'll refund your \$\$ in full.
